TARDIS

VISUAL IDENTITY GUIDE

A clear way through complex systems.

An evolutionary identity built from the paired-pillar mark and the indigo already recognized across Tardis products.

TARDIS INDIGO / #0A00B0

One mark. One clear promise.

Tardis creates calm, dependable interfaces for technical tools. Its paired pillars make a simple passage: two strong forms with a clear opening between them.

Keystone keeps the shape people already know, then redraws it with mirror-balanced geometry, a consistent 15-degree shoulder, and a central opening that stays visible at small sizes.

CAPABLE

Strong geometry; no unnecessary effects.

PRECISE

Names, versions, and states stay explicit.

COMPOSED

A dark, quiet interface keeps focus on the task.

BRAND IDEA

A clear way through complex systems.

Keep the paired-pillar silhouette and saturated indigo as the two strongest recognition cues.

HORIZONTAL SIGNATURE

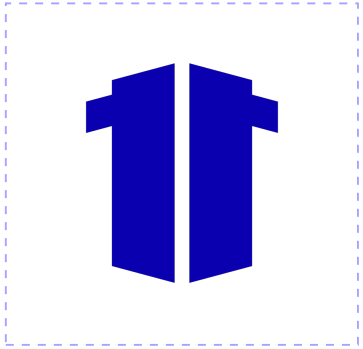

Use the master artwork as supplied.

PRIMARY / HORIZONTAL

SYMBOL

STACKED SIGNATURE

CLEAR SPACE

24 UNITS MINIMUM

Clear space scales from the symbol's 24-unit side margin. In a lockup, leave at least the T-height between symbol and wordmark.

Minimums: symbol 16 px (use the small-size file below 24 px); wordmark 96 px wide; horizontal signature 140 px wide. For print, symbol 6 mm high and horizontal signature 28 mm wide.

Approved backgrounds: indigo on white or a pale neutral; white on Indigo or Midnight; white over a quiet image area. Use the app-icon tile when a container is needed.

Indigo leads. Neutrals make room.

TARDIS INDIGO

#0A00B0

RGB 10 / 0 / 176
CMYK 94 / 100 / 0 / 31 approx.

MIDNIGHT

#080914

RGB 8 / 9 / 20
CMYK 60 / 55 / 0 / 92 approx.

PANEL

#14152F

RGB 20 / 21 / 47
CMYK 57 / 55 / 0 / 82 approx.

PAPER

#F5F5FF

RGB 245 / 245 / 255
CMYK 4 / 4 / 0 / 0 approx.

LAVENDER

#A6A2FF

RGB 166 / 162 / 255
CMYK 35 / 36 / 0 / 0 approx.

SIGNAL CYAN

#56C7FF

RGB 86 / 199 / 255
CMYK 66 / 22 / 0 / 0 approx.

Logo use: primary indigo on light surfaces; reversed white on indigo or dark surfaces. Keep lavender as the readable dark-mode accent. Cyan is optional and secondary. Semantic UI colors are separate from the logo palette: success #88E6BC, caution #F3C977, error #FF858E.

Distinctive in the mark. Native in the product.

CUSTOM TARDIS WORDMARK / VECTOR MASTER

INTERFACE SANS

Clear actions. Honest status.

Use -apple-system, BlinkMacSystemFont, Segoe UI, Arial, sans-serif. Regular for body text; semibold for controls and labels; bold for headlines. No remote font is required.

DIAGNOSTIC MONO

```
[2/3] relapse.js
Kernel read/write ready
!1000  wait before next payload
```

Use SFMono-Regular, Consolas, or a system monospace for payload names, logs, addresses, and versions. Keep diagnostic text readable and never use the display wordmark font for technical data.

Type scale for product surfaces: 22-28 px page title; 14-18 px control labels; 14 px minimum for desktop explanatory copy when space allows; 13 px minimum on compact screens; 14 px or larger for console output on desktop. Favor short, sentence-case headings.

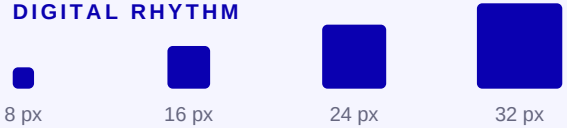

The TARDIS wordmark is custom outlined artwork. Do not type it in a stock font. Interface font families are system stacks and do not require distribution or remote loading.

Repeat the geometry, not the logo.

PILLAR REPEAT / 12% TINT

Use the paired-pillar pattern on broad, quiet surfaces. Leave it off console text, dense charts, and exploit details.

DIGITAL RHYTHM

12 PX CARD CORNER

Prefer filled or simple outline icons with consistent weight and square or lightly rounded corners. Use indigo for the active state, not as a substitute for written labels.

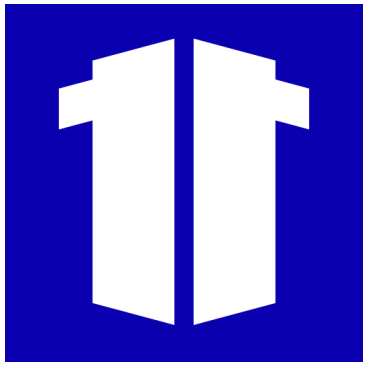

MOTION AND SOUND

Keep the logo static on core product screens. A separate brand reveal may assemble the two pillars from the center and resolve within 600 ms. Never delay exploit startup or cover a status message; respect reduced-motion preferences. No sound cue is defined.

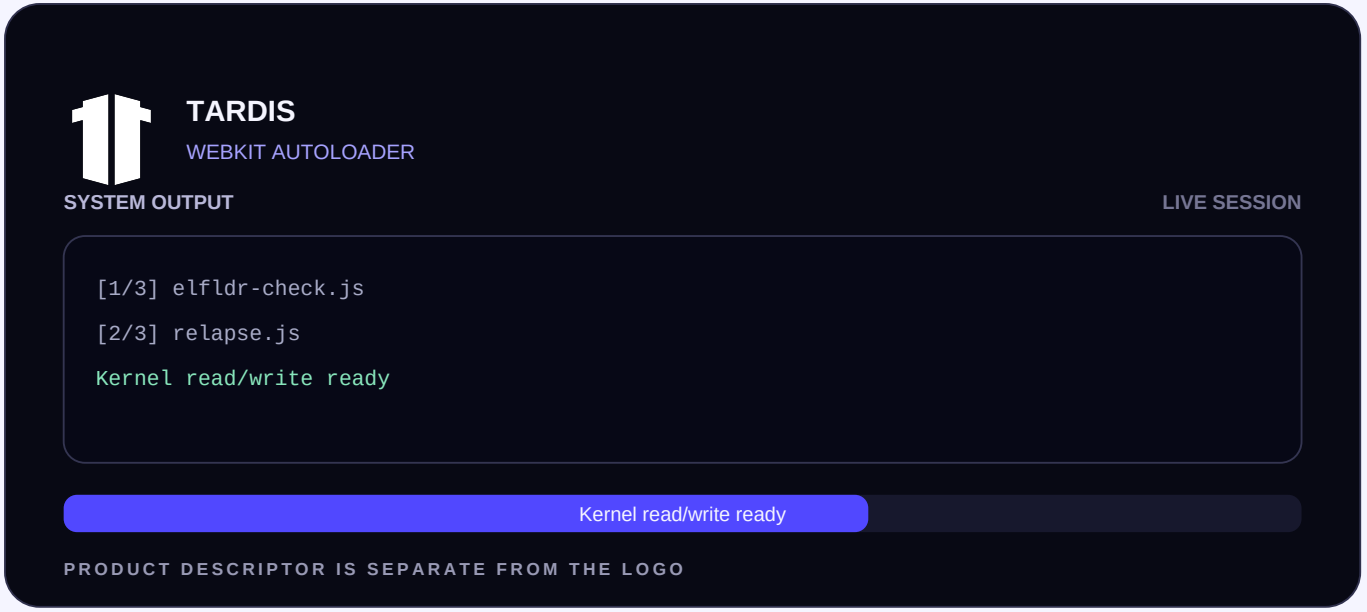

Tardis WebKit Autoloader

The brand frames the task; technical information stays in front. The installer and autoloader work offline, so keep every visual asset embedded or local and avoid remote fonts and images.

HOMESCREEN ICON

White mark on solid Indigo; 10% safe padding.

Keep focus states visible, keep status meanings explicit, and preserve the original payload order and console output.

One source of truth. Easy handoff.

VECTOR MASTERS

brand/logo/tardis-symbol.svg
brand/logo/tardis-symbol-small.svg
brand/logo/tardis-wordmark.svg
brand/logo/tardis-lockup-horizontal.svg
brand/logo/tardis-lockup-stacked.svg

READY-TO-USE EXPORTS

brand/exports/ has indigo, black, and reversed SVGs, square and app-icon assets, PNG size sets, favicon.ico, Apple touch icon, webmanifest, and PWA icons.

PRODUCT FILES

assets/icon.svg is the PS5 icon source. frontend/autoloader/ is the exploit experience. frontend/installer-page/ and frontend/pointer/ carry the install and launch states.

HANDOFF CHECKLIST

- Use SVG for scale-independent screens; use the supplied PNG and ICO for app, browser, and device slots.
- Use the small-size mark below 24 px. If the wordmark becomes too small, switch to symbol-only.
- For print, use a one-color vector and confirm color with the printer's profile; supplied CMYK values are estimates.
- Preserve offline operation. Do not add remote fonts, images, or requests to the cached PS5 experience.
- Keep the app label, setup page, pointer page, and running screen named Tardis WebKit Autoloader.

Clear, repeatable guidance keeps the identity consistent. Trademark clearance was not part of this design work.
